This is a workaround for the `postgresql.service` remaining stuck in status "deactivating": Create the file `/etc/systemd/system/postgresql.service.d/stop.conf` and put the following contents to it (without the markdown code fences above and below):

```
[Service]
ExecStopPost=+/usr/bin/systemctl daemon-reload
```

Set Localization

```
localectl list-locales
localectl set-loCALE LANG=en_US.UTF-8
```

Rename ethX network

```
/etc/udev/rules.d/70-persistent-net.rules
```
